- ▶ **Abstract:** I analyze the effect of the 2018 trade war on ambient levels of air quality in the United States of America. Domestic tariffs placed by the US on imported foreign goods and foreign tariffs applied to US exports by other countries both impact US production, which can translate into emissions. Using the EPA’s Air Quality dataset, PM2.5 monitor readings, and satellite PM2.5 data, I implement a shift-share methodology to demonstrate that exposure to foreign tariffs results in a modest improvement in air quality, with null results for exposure to domestic tariffs. I provide insight and empirical evidence on the existence and magnitude of pollution haven effects.
